

CentreWare DP

Network Printer Services for DocuPrint Network Printers

Simple, On-Cue Printer Management

Xerox CentreWare DP is the easy-to-use printer management software for Xerox printers. Thanks to the ease of point-and-click navigation, administrators will be able to quickly install, connect, and configure Xerox printers on a network. CentreWare DP is designed specifically for the network administrator, so that setup procedures are simplified, and management of Xerox printers is virtually effortless.

Key Features and Benefits of Xerox CentreWare DP

Setup Wizard for Novell Network

CentreWare DP's installation wizard for Novell NetWare makes setup of Xerox printers fast and easy. NetWare users can take advantage of the automatic creation and linkage of printer objects in the NDS tree. The advanced setup feature allows administrators to perform queue management and service multiple queues.

Remote Configuration and Management

CentreWare DP allows system administrators to remotely configure, monitor and manage all printers on local and wide area networks. Each configuration can be password protected. Detailed drawings will display the actual configuration of all supported printers on the network, and include installed features like paper trays and mailbox options. At the click of a button, administrators have access to such information as printer memory and installed fonts.

Printer and Consumable Status

No need to worry about playing the guessing game when it comes to a printer's status. CentreWare DP allows the administrators to perform up-to-the-minute status checks, and keep Xerox printers fully operational. For example, administrators can monitor the status of paper, toner and other consumables on Xerox printers. When such supplies have been depleted, mimics show which consumables need replacement and where they're located.

Diagnostics and Troubleshooting

The accessibility of printer and network information provides administrators with the means to quickly and accurately detect network printing problems. By minimizing printer downtime, administrators will improve workgroup satisfaction with network printing.

Supported Environments

Network-Operating System Support:

Novell NetWare 3.1x, 4.1x
Microsoft Windows NT Server 3.51, 4.0

Client Support:

MicroSoft Windows 3.1x, Windows 95/98, and Windows NT 3.51, 4.0

Printer Support:

DocuPrint N17, DocuPrint N24, DocuPrint N32, DocuPrint N40, DocuPrint C20/NC20 and DocuPrint NC60, DocuPrint C55, DocuPrint 4512*, DocuPrint 4517**

* DocuPrint 4512 requires firmware software version 600.146 or higher.

** DocuPrint 4517 requires firmware software version 2.0 or higher.

Status information is provided for Hewlett-Packard JetDirect connected printers configured with an IP address.

System Requirements:

486 processor and a VGA monitor (minimum)
NetWare Client 32 for Windows 95/98/NT or MicroSoft Client for NetWare Networks for Windows 95/98/NT
NetWare VLM for Windows 3.1x

Software Distribution

CentreWare DP can be obtained with the purchase of a Xerox network printer, or electronically from our CentreWare Network Printer Services web site at <http://www.xerox.com> or <ftp://spectrum.xerox.com>.
